Create Company Overview

Create Company provides an easy way to create a new Sage 300 company database even if you are not highly technical – you simply type in a code and a name for the company, and Create Company does the rest.

When used with Copy Company, Create Company lets a finance department set up small test databases without involving IT staff or contractors. Copy Company lets you copy the structure of an existing company, while eliminating any transactional data.

In tightly controlled environments, IT staff can block Create Company's operation by restricting database creation rights. For these environments, Create Company becomes a tool for IT staff, rather than for financial users.

If you wish to copy an existing company, using Create Company is the first step in the process.

Important Note: Some coordination with IT staff or contractors may be required, initially, to provide access passwords and rights. It may also be necessary to adjust backup processes when new production databases are created.

Creates Company Databases Only

Sage 300 provides a general set of tools for creating system and company databases that requires a more technical understanding of Sage 300 databases.

Create Company does something much simpler – it just creates a new company database. For most users, the process is as simple as filling in two fields (Database ID and Description) and clicking the Create button.

👳 TaiRox Create	Company	-		×
File Help				
Database Adva	ced			
Sage 300 Comp	any Database Information			
Database ID	NEWSAM			
Description	New Sample Data			
Sage 300 Syste	n Database Information			
Database ID	SAMSYS 🗸			
Description	SAMSYS			
Create			<u>C</u> lose	

Even if advanced settings are required, Create Company will still save a lot of time. A few limitations are identified here.

• Firstly, Create Company only creates company databases. It will not create a System database (or a Sage300Store or Sage300Vault database if you are using Sage 300 2023 PU2 or higher).

If you are already running Sage 300, this is not an issue – the system, store and vault databases must already exist.

- Secondly, for those customers with more than one system database a questionable setup for all but the larger, more complex environments – you must select a system database from the dropdown list. If there is only one system database – by far the most common situation – the dropdown list will be disabled.
- You can change the name of the database on the Advanced tab. Create Company will use the Database ID entered on the Database tab unless you change it.
- The final limitation has to do with "authentication".

You need to enter a SQL Server database user name and password when you start Create Company.

Installing Create Company

Create Company is installed and run like any other Windows program. The installation program adds it to the Windows Start List, and you can create an icon to launch the program from the Sage 300 desktop.

Create Company can be uninstalled from **Windows Control Panel > Programs and Features** or from **Settings > Apps and Features**, depending on your version of Windows.

Create Company is distributed as 1 file, Setup.msi.

• The program is installed by default in "C:\Program Files (x86)\TaiRox\CreateCompany\"

Running Create Company

Once you install Create Company, you can run it from the Windows Start list, from the Windows desktop or from the Sage 300 desktop (if you add the icon there).

If you get the following message:

Right-click the entry in the Start list, and select More > Run as Administrator

Create Company	-⊐ Pin to Start		
Create License Key	More	>	-⊢⊐ Pin to taskbar
Ӯ Download Rates	🛍 Uninstall		G Run as administrator
🥏 Fast Clear History			D Open file location

Alternatively, you can log in as an administrator to run the program or to change the program properties to always run it as an administrator.

Note: The default SQL Server administrator name is "sa". If another user name is used, it must have sufficient rights to create a database, and it will become the owner of the new database.

Log in to the SQL Server Instance for Sage 300

When you launch the program, it will ask you to connect to the SQL Server instance where Sage 300 is installed.

👳 TaiRox Create Compa	ny	_		\times
File Help				
D 💌 Connect to SQL	Server		>	<
SQL Server				
Server [\Instance]	SAGE300-2019		~	
Login ID	Sā			
Password	*****			
r	Remember password			
	Connect	С	ancel	
Create			Close	

Note: The default SQL Server administrator name is "sa". If another user name is used, it must have sufficient rights to create a database, and it will become the owner of the new database.

Create Company will inspect the installation to see which databases are installed and how many system databases are in use. It will then display the following screen.

	Company			—	×
ile Help					
Database Adva	anced				
Sage 300 Com	ipany Database	Information			
Database ID					
Description					
	Database bi	formation			
-Sage 300 Syst	em Database im	Unination			
– Sage 300 Syst Database ID	SAMSYS	~			
- Sage 300 Syst Database ID Description	SAMSYS SAMSYS				
Sage 300 Syst Database ID Description	SAMSYS				

Enter a Database ID and Database Description

You need to enter a Database ID (a 6-character code that Sage 300 will use to identify the company) and a descriptive name for the company.

If your server includes more than 1 system database in use, the program will enable a drop-down list so you can choose the correct system database.

Note: The new database will be created using the same collation sequence and recovery model as the system database. Only in very unusual circumstances should the collation sequence be anything other than Latin1_General_BIN and in all cases the system and company databases should have matching collation sequences. For most Sage 300 installations, the recovery model should be Simple.

Fill in the screen with values such as those below and press the Create button to create a new company using Windows authentication (or using the most recent settings).

-Sage 300 Syst	em Database Information		
Database ID	SAMSYS \vee		
Description	SAMSYS		

If you want the database name to be different from the Database ID, you will need to click the Advanced tab.

Changing the Database Name

The Advanced tab looks like this. It shows you the current server, login ID, and database name.

💆 TaiRox Create (Company	—		\times
File Help				
Database Advar	ced

When you press the Create button, it will take a few seconds to create the new database. Once created, the following dialog box will appear:

Informat	tion	×
1	Sage 300 Database ID NEWSAM for New Sample Company Data was created successfully.	
	ОК]

Activate Sage 300 After Create Company

The newly created company will appear in the drop-down list when you log onto Sage 300 in the normal way:

Open Compar	у	?	×
User ID Password	ADMIN Windows Authentication Change Password	O Car	K
Company Session Date	New Sample Company Data 2023-06-29		~

When you click OK to open the company for the first time, it will create some common services tables,

Propagating System Tables	
propagating Table [CSCRD] 1500 records

and then you will be asked for a fiscal year start date.

Enter the date, and click the Proceed button to activate Common Services. This is the normal way that Sage 300 creates initial data for the Company.

After activation, a new form will appear, where you can enter company information on the first tab.

TaiRox Create Company for Sage 300

© 2009-2024 TaiRox Software Inc. All rights reserved.

• You can enter or skip the address information, but you **MUST** click on the Options tab to specify whether this is a multicurrency company and to select a currency.

NEWSAM - Common Services Activation -		×
Address Options Email Number of Fiscal Periods 12		
Locked Riscal Period Warning V Warning Date Range Inactive G/L Account Warning V Non-existent G/L Account Error	30	_
Location Type Location Code Country Code Branch		
Multicurrency Functional Currency Q +		
Sage Data & Analytics		
Web Address Subdomain	Can	cel

- Click the Multicurrency checkbox if this is a multicurrency ledger.
- Choose which currency is the functional (home) currency of the company.

Note: You cannot change the Multicurrency setting or the functional currency after activating the company. All other information – on all three tabs – can be edited on the Company Profile in Common Services.

Activate Each of the Accounting Applications

After activating Common Services, you will see the Sage company desktop for the new company. You must now use the Data Activation function in Administrative Services to activate the accounting modules you need for the new company (G/L, A/R, A/P, etc.).
