## **Summary - Fix Item Valuation Errors**

Fix Item Valuation Errors is a data repair tool used by consultants to correct errors that can arise in Sage 300 Inventory Control tables and are reported by the data integrity checking program.

## **Overview - Fix Item Valuation Errors**

Fix Item Valuation Errors will check ranges of item numbers and locations for the Item Valuation error reported by the data integrity checker. Errors are reported when the sum of the quantities and/or costs in the valuation rows do not add up to the total in the location row. Should any be reported, pressing the Fix button will repair the data by creating a new valuation row. A log of changes is kept.

## **Running Fix Item Valuation Errors**

Once the TaiRox Productivity Tools are installed and activated, the Fix Item Valuation Errors icon will be shown from the TaiRox Productivity Tools menu on the Sage 300 desktop (and can be copied to other menu locations).

## Running Fix Item Valuation Errors (continued)

Fix Item Valuation Errors creates a valuation entry that is the difference between the total kept in the ICILOC table and the sum of valuation entries in the ICIVAL table. This error can arise with some versions of Sage 300. For that newly created entry, the Transaction date, year and fiscal period can be entered here.

The screenshot shows a software dialog box titled "SAMLTD - TaiRox Fix Item Valuation Errors". The window has a menu bar with "File" and "Help". Below the menu bar is a section titled "Item and Location Range" containing four input fields: "From Item Number", "To Item Number", "From Location", and "To Location". The "To Item Number" and "To Location" fields contain diagonal hatching. Below this section are two date/period fields: "Transaction Date" with the value "06/19/2020" and a calendar icon, and "Year/Period" with the value "2020 - 06" and a dropdown arrow. The main area of the dialog is a large, empty white space with a scroll bar on the right. At the bottom of the dialog, there are four buttons: "Check", "Fix", "Log...", and "Close".
